

Discovery 2 - 2003 onwards (Round Headlights) Radiator Muff

Open the bonnet and remove three screws holding the top of the grill in place.

Ease top of the grill towards yourself and lift out of bottom mounts and clear of the vehicle.

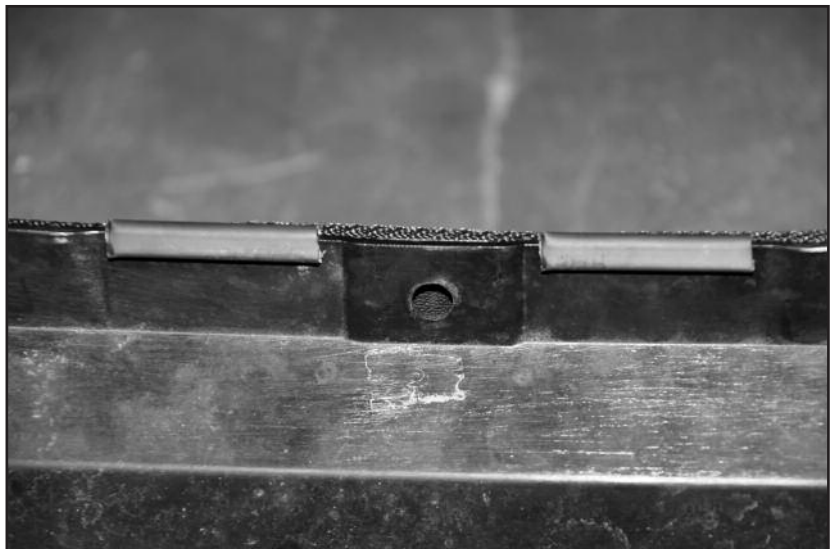

The four clips off the radiator muff go to the top.

Hook over the four top clips first from the centre out then the three bottom clips and the two sides clips last.

Close the cover and do up the poppers.

Then refit the grill in reversal of removal instructions.

Important

This radiator muff is designed to help the engine warm up quicker during cold weather conditions, once the engine has reached operating temperature the cover must be opened to allow the cooling system to work properly and prevent overheating.
